

BLUE POWER

LAKE COLORANT WITH BENEFICIAL ENZYMES

AVAILABLE IN 5 GALLON TOTE OR A 6 X 1 CASE

**DOES THE COLOR OF YOUR LAKE
WATER MAKE YOU FROWN? DOES
LIGHT PENETRATE ALL THE WAY TO
THE BOTTOM OF YOUR LAKE?**

Micro-Lyfe Blue Power can improve common lake problems. Micro-Lyfe Blue Power contains blue dye, which decreases sunlight penetration and colors the water a pleasing shade of blue.

Micro-Lyfe Blue Power differs from other dyes on the market with the addition of amylase enzymes. Adjust color intensity by adding more or less dye. Once diluted into the lake, dye will not stain fish, swimmers, concrete, or rocks.

DIRECTIONS:

Shake well before using. Add 1 gallon Blue Power per 4 acre feet directly to your lake.

- Undiluted colorant could stain concrete or rocks.
- Due to differences in water quality and composition, actual color may vary.
- To achieve a particular hue, start by applying half the dosage rate and then slowly increase dosing until the desired color is attained.
- Allow 24 hours between doses.

- ① Safely colors water an appealing shade of blue
- ② Blocks out photosynthetic light wavelengths
- ③ Amylase enzymes help digestion of organic wastes
- ④ Mixes throughout pond in a few hours
- ⑤ Diluted product will not stain birds, fish, or most concrete or pond rocks
- ⑥ Safe for humans, animals, plants and aquatic life
- ⑦ No swimming, irrigation or fishing restrictions

CAUTION:

- Keep out of reach of children.
- Do not use internally. If swallowed, give several glasses of water and contact a physician
- Avoid contact with eyes, flush immediately if needed
- If contact is made with open wounds, wash with soap and water
