

SLUDGE CLEAR

BIOSTIMULANT FOR FASTEST SLUDGE & MUCK REDUCTION

AVAILABLE IN 5 GALLON TOTE OR A 6 X 1 CASE

IS MUCK-REDUCTION YOUR NUMBER ONE LAKE IMPROVEMENT PRIORITY?

Micro-Lyfe Sludge-Clear enhances muck reduction as part of your Micro-Lyfe Concentrate or Micro-Lyfe Complete program. Lakes with thick sludge layers release toxic gasses that smell bad and threaten fish and other aquatic life.

While accelerating the breakdown of muck, Micro-Lyfe Sludge-Clear also binds excessive nutrients, resulting in improved water clarity. This biological stimulant will enhance the muck and nutrient reduction properties of our other microbiology products, especially in warm-water.

DIRECTIONS:

Shake well before using. For well aerated lakes use 4 gallons per acre for the initial treatment, then add 2 gallons per acre weekly, followed by 2 gallons per acre monthly until your sludge reduction goals are met. Double the above rates for non-aerated lakes.

To apply, pour slowly from the container directly into the lake along the entire perimeter or dilute with enough non-chlorinated water to attain even coverage. Rinse container thoroughly when done.

If any copper based algaecides, herbicides, Hydrothol 191 or peroxide products are used to treat algae or aquatic weeds apply Micro-Lyfe Sludge Clear at least 72 hours before or 72 hours after those applications. Never add Sludge Clear to a spray tank that has previously been used with copper.

- 1 Enhances and speeds bottom sludge and muck reduction
- 2 Best when used with Micro-Lyfe Complete, Concentrate or Digester Reduces foul odors
- 3 Binds excessive nutrients including phosphates
- 4 Cationic charge binds with suspended solids improving clarity
- 5 Works fastest in warm water conditions
- 6 Helps improve pond clarity - 100% active ingredients
- 7 Disperses quickly and is Bio-degradable

CAUTION:

- Keep out of reach of children
- Do not use internally
- If contact is made with open wounds, wash with soap and water
